

3D Thickness Kit

Project Goal

Create a set of plates with a fixed thickness to quick measure height.

The available thickness are:

- 1.0
- 2.0
- 3.0
- 4.0
- 5.0
- 6.0
- 7.0
- 8.0
- 9.0
- 10.0

Sketch

This a 80×30 mm rectangle, with a central part with a thickness of 0.6 mm so it can be flexible and 2 side towers with the nominal height.

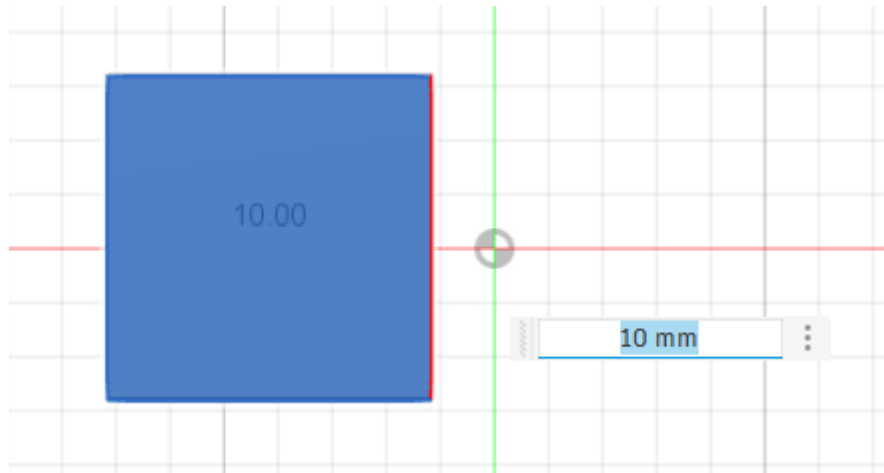

The 5 mm hole is perfect for an elastic rope to keep all spacers together.

3D

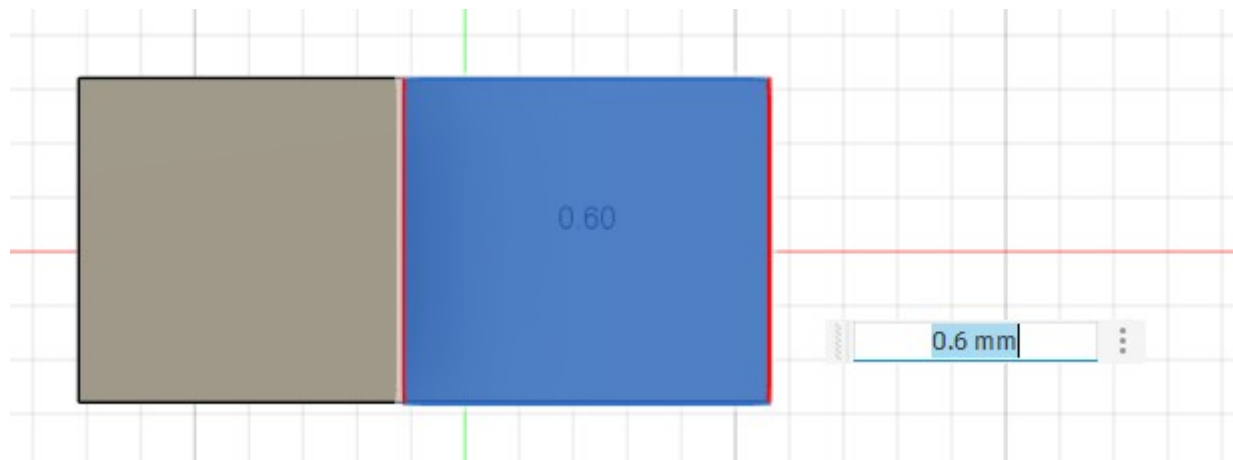

Main 30x30 socket

This is the control surface where we apply the nominal height. In the example below it is 10 mm

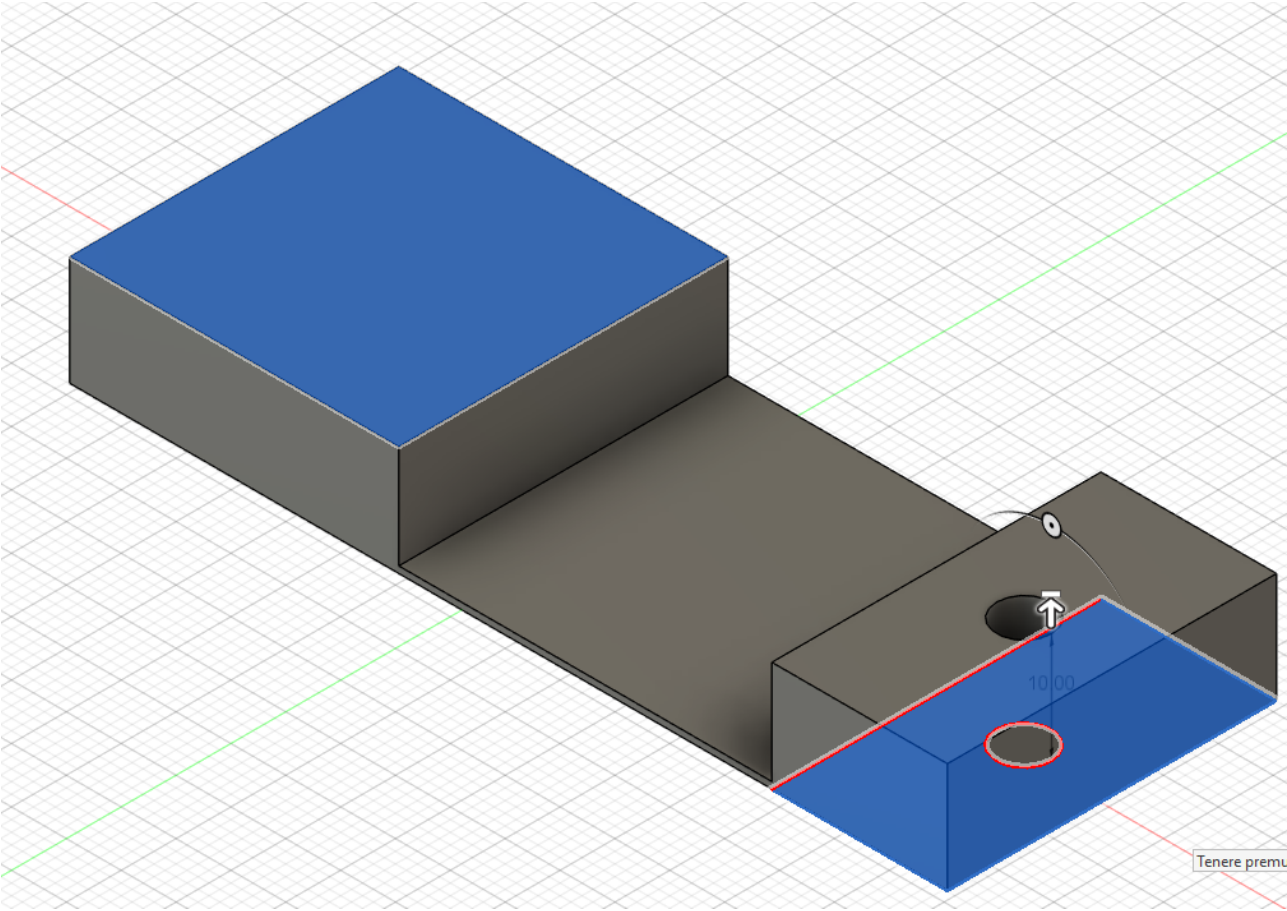

Central part

This is the flexible part

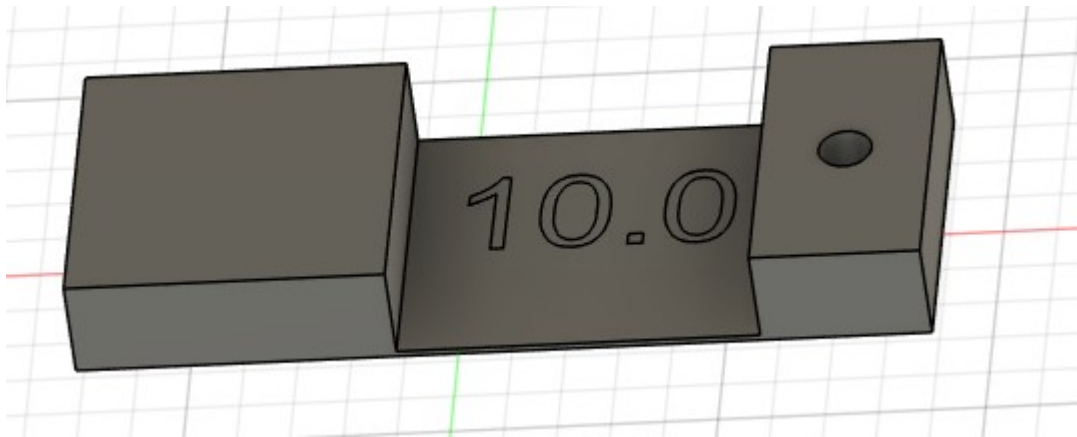

Ring Side

This surface extrusion is linked to the first block

3D Layout

Print Layout

We need 2 colors, one for the body and one for the text
